PROFESSIONAL SUMMARY

An early-career IT professional with current university IT Help Desk Tier 1 Support experience and an Masters in Cybersecurity in progress, backed by a Bachelor's in Computer Science and Information Technology. My experience spans user support, Windows and Active Directory environments, networking, PowerShell, security auditing, and technical research, with an expanding portfolio in vulnerability assessment and offensive and defensive security. I bring strong troubleshooting, adaptability, and a learning mindset to IT and Cybersecurity teams responsible for secure, reliable, and user-focused systems.

EDUCATION

La Salle University

Philadelphia, PA

Graduate: Cybersecurity (GPA 4.0/4.0)

M.S.: Anticipated December '27

Majors: Computer Science and Information Technology (GPA 3.72/4.0)

B.S.: Graduated May '26

Minor: Mathematics

EXPERIENCE

La Salle University Tier 1 IT Help Desk Support

August 2026 – Present

- Manage and resolve Tier 1 requests through TeamDynamix ticketing systems, troubleshooting MFA and password access, Wi-Fi connectivity, software installations, printers, hardware, and peripheral issues to restore users' access to university technology
- Set up and troubleshoot computers and peripherals, perform hardware diagnostics and supported repairs, installed required software and verify that equipment and applications function correctly before returning them to users
- Document reported symptoms, diagnostic steps, and resolutions in ticket records; communicate technical guidance clearly to users and escalate complex or unresolved incidents to Tier 2 technicians with complete notes and evidence of prior troubleshooting

La Salle University AI and Security Researcher

May 2024 – October 2025

- Researched how generative AI tools, ChatGPT and Gemini, could affect information security, ethical hacking, social engineering, security automation, and offensive and defensive workflows, evaluating practical benefits alongside risks such as inaccurate output, misuse, and unsafe guidance
- Mapped generative AI assistance across ethical-hacking activities such as reconnaissance, scanning, vulnerability analysis, reporting, and classroom labs, translating the findings into a responsible, ChatGPT-infused curriculum presented at MSCHE 2024
- Collaborated with faculty researchers to document the curriculum design, security implications, and lessons learned, resulting in a peer-review paper published in the 2025 IEEE Integrated STEM Education Conference proceedings

TCBMe Foundation Research Staff Member

May 2024 – October 2025

- Contributed to a \$10,000 community-driven research initiative developing a gamified youth mental-health platform, connecting technical research, social-emotional learning, and product development to support identity expression and positive engagement
- Built and tested AI-assisted, form-based prototypes using Python and JavaScript while considering usability, responsible data handling, and security requirements within a youth-centered application
- Presented the team's gamification research to mental-health and education practitioners at the 2025 Philadelphia Trauma Training Conference at Thomas Jefferson University and contributed to the resulting publication

Inn Dwelling Mathematics Instructor

July 2023 – June 2026

- Delivered individualized and small-group instruction in Pre-Algebra through Calculus, adapting explanations and practice to students' skill gaps to strengthen conceptual understanding, problem-solving ability, and confidence

MSBT Dietary Aide

March 2023 - Present

- Supported daily food-service and retreat operations by coordinating preparation, setup, service, sanitation, and changing guest needs, helping the team maintain dependable service in a fast-paced environment

- Applied algorithms and data structures involving graphs, dynamic programming, greedy methods, trees, and number theory using Python, Java, and C++; competed in six programming contests and earned first place at ICPC North America Qualifiers Division 2 at Johns Hopkins University

PROJECTS

Enterprise Active Directory Security Lab – August 2026

- Designed and deployed a virtualized Windows Server 2022 enterprise environment with a domain-joined Windows 11 client, configuring AD DS, DNS, DHCP, organizational units, user and group accounts, and Group Policy to centralize identity, policy, and endpoint administration
- Implemented least-privilege file access using AGDLP, departmental security groups, SMB shares, and layered share/NTFS permissions; tested multiple user roles to confirm authorized access and prevent cross-department access
- Hardened and monitored the environment through password, firewall, SMB, Windows security auditing, and PowerShell logging controls; analyzed authentication, identity-change, and process telemetry and validated exposed SMB, DNS, and LDAP services from Kali

LRG – Team Composition Web Tool – June 2026

- Designed, developed, and deployed a responsive composition-planning application using HTML, CSS, and JavaScript, supporting five-player lineups across 13 maps with agents organized by gameplay role
- Implemented browser-based persistence for saved compositions, custom player labels, application settings, and per-map agent assignments, along with downloadable screenshots that make strategies reusable and easy to share

TECHNICAL SKILLS

IT Support: End-user support, Windows 10/11 troubleshooting, hardware and software troubleshooting, software installation, workstation and peripheral setup, account-access support, ticketing systems and documentation

Systems & Administration: Active Directory, Group Policy, DNS, DHCP, SMB file sharing, NTFS permissions, VMware Workstation Pro, PowerShell

Cybersecurity & Networking: Windows Event Logs and Security Auditing, Kerberos, Nmap, Wireshark, TCP/IP, AI Security

Programming & Development: Python, Java, C++, SQL, JavaScript, HTML/CSS, Git
